

TEAM SYNERGY COATINGS

Announces a New Family of Specialty Coatings Products

TEAM SYNERGY COATINGS, manufacturers a variety of coatings, that fit no specific industry category, but offer Superior Performance when used for the service indicated. Listed below are some of our "Specialty Coatings". We are always developing new coating materials, as applications & severe service require. The impetus for such development comes mainly from our relationship with our customers Please fell free to ask about coatings under development. If you have an application that appears to require a new formulation, please contact our technical Department at 800-440-9540, ask for Bill Hayward.

SP-314 CLEAR PROTECTIVE COATING

- Adds additional Chemical and Corrosion protection to any substrate
- Hard flexible coating
- Can be applied to any metal
- Protects polished surfaces
- Excellent for marine applications
- **Requires baking.** Cures at 300f minimum. **Must be oven baked**

SP-303 INSULATING COATING

- Designed to reduce Thermal Heat Transfer

Excellent for floor boards and firewalls to reduce heat transfer keeps enclosed compartments cooler

- Reflective to heat
- Excellent thermal barrier
- Requires **NO Baking**, Air Cures
- Spray or brush applied 1.5 to 2 mils
- Perfect for coating Un-insulated piping and equipment, to protect from touching hot surfaces, reduces surrounding ambient.

SP-302 FIRE RETARDANT COATING

- **NHRA AND IHRA ACCEPTABLE**
- Produces an insulating blanket to protect all combustible surfaces
- Formulated to protect fiberglass, carbon fiber and Kevlar. Will bond to metal
- Spray or brush
- Limits spread of flame. Smoke/fumes produced by protective action are not toxic.
- Requires **NO Baking**, Air Cures
- Industrial and Automotive uses

SP-304 Quick SPEED COATING

- Designed to reduce friction and cavitations on water, snow or ice.
- Use on boat hulls (sail and power), decreases fuel consumption, water skis, jet skis, rudders
- May be used on equipment slides or other parts subject to friction and galling
- Corrosion resistant
- Spray or brush on
- Requires **NO Baking**, Air cures

SP-301-Gold Carburetor Finish Coating

- Gold appearance coating for carburetors
- Excellent Chemical and corrosion resistance
- Excellent for restorations
- **Requires baking**. Cures at 300f minimum. **Must be oven baked**

Contact Team Synergy Coatings, if your application does not fall within these product parameters. www.coat-this.com
